Sequence 15. Application US/09539601C

Sequence 15. Application US/09539601C

Patent No. 6630343

GENERAL INFORMATION:
APPLICANT: Bartenschlager, Ralf FW

TITLE OF INVENTION: Hepatitis C Virus Cell Culture System
FILE REPERENCE: all sequences
CURRENT APPLICATION NUMSER: US/09/539,601C

CURRENT FILING DATE: 2001-08-30

EARLIER FILING DATE: 199-04-03

NUMBER OF SEQ ID NOS: 51

SOFTWARE: PATENTING Ver. 2.1

SEQ ID NO 15

LENGTH: 2201

TYPE: PRT

ORGANISM: Hepatitis C virus

Sequence 2, Application US/09263933

Patent No. 6280940

GENERAL INFORMATION:

APPLICANT: Potts, Karen E.

APPLICANT: Jockson, Roberta L.

APPLICANT: Jackson, Roberta For USE IN CELL-BASED ASSESSMENT TITLE OF INVENTION: OF INHIBITORS OF THE HEPATITIS C VIRUS PROTEASE

FILE REFERENCE: 0125-0005A

CURRENT APPLICATION NUMBER: US/09/263,933

CURRENT FILING DATE: 1998-08-08

EARLIER APPLICATION NUMBER: 09/129,611

EARLIER APPLICATION NUMBER: 09/129,611

EARLIER APPLICATION NUMBER: 09/129,611

EARLIER FILING DATE: 1998-08-05

NUMBER OF SEO ID NOS: 33

SOFTWARE: Patentin Ver. 2.0

SEO ID NO 2

LENGTH: 2307

TYPE: PRT

ORGANISM: Artificial Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    422
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   242
                                                                                                                                                                                                                                                                                                                                                                                                    6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 9, Application US/09263933

Patent No. 6280940

Patent No. 6280940

GENERAL INFORMATION:
APPLICANT: Potts, Karen E.
APPLICANT: Potts, Karen E.
APPLICANT: Jackson, Roberta L.
APPLICANT: Jackson, Roberta L.
APPLICANT: Patick, Amy K.
TITLE OF INVENTION: REPORTER GENE SYSTEM FOR USE IN CELL-BASED ASSESSMENT TITLE OF INVENTION: OF INH.BITORS OF THE HEPATITIS C VIRUS PROTEASE
FILE REFERENCE: 0125-00058

CURRENT APPLICATION NUMBER: US/09/263,933

CURRENT FILING DATE: 1999-03-08

EARLIER FILING DATE: 1998-08-05

NUMBER OF SEQ ID NOS: 33

SOFTWARE: Patentin Ver. 2.0

SEQ ID NO SEQ ID NOS: 33

CORGANISM: Artificial Sequence

US-09-263-933-9
RESULT 13
US-09-919-901-9
; Sequence 9, Application US/09919901
; Patent No. 6599738
; GENERAL INFORMATION:
; APPLICANT: Potts, Karen E.
; APPLICANT: Jackson, Roberta L.
; APPLICANT: Jackson, Roberta L.
; APPLICANT: Patick, Amy K.
; TITLE OF INVENTION: REFORTER GENE SYSTEM FOR USE IN CELL-BASED ASSESSMENT
; TITLE OF INVENTION: OF INHIBITORS OF THE HEPATITIS C VIRUS PROTEASE

Thibeault D,

Novel polypeptide for screening inhibitors of non-structural proteases useful as therapeutic agents against hepatitis C virus, comprises full length non-structural protease, or its truncation.

Claim 41; Page 59-60; 67pp; English.

The invention relates to an isolated polypeptide consisting of a full-length HCV (hepatitis C virus) non-structural (NS)2/3 protease (referred to also as NS2/3 (810-1206)), or its truncation, having as its N-terminal residue amino acid sequence from residues 904 to 1206 of hepatitis C virus (HCV) 1b-40 full-length NS2/3 protease. Also included are (1) a composition (C) comprising an isolated HCV NS2/3 protease selected from full length NS2/3 protease, and isolated HCV NS2/3 protease selected from full length NS2/3 protease, or its truncation or a mutated sequence, where the protease is in a solution comprising a sufficient concentration of lawy Ndiethylamine oxide (LDAO) comprising a sufficient concentration of lauryldiethyl inhibitory peptide

The invention relates to an isolated polypeptide consisting of a full-length HCV (hepatitis C virus) non-structural (NS)2/3 protease (referred to also as NS2/3 (810-1206)), or its truncation, having as its N-terminal residue amino acid 810 to 906, or having a minimal amino acid sequence, from residues 904 to 1206 of hepatitis C virus (HCV) 1b-40 full-length NS2/3 protease. Also included are (1) a composition (C) comprising an isolated HCV NS2/3 protease selected from full length NS2/3 protease, or its truncation or a mutated sequence, where the protease is in a solution comprising a sufficient concentration of lauryldiethylamine oxide (LDAO) to prevent auto-cleavage of the protease, (2) a NS2/3 inhibitory peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         HCV; enzyme; protease; NS2/3 (827-1206); hepatitis C virus infection; chronic liver disease; cirrhosis; end-stage liver disease; virucide; hepatotropic; antinflammatory; lauryldiethylamine oxide; LDAO; chaotropic agent; mutant; mutein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC appearing as ABG32198; (3) producing (M1) a refolded, inactive HCV NS2/3
CC protease, involving isolating the protease in the presence of a
CC chaotropic agent, refolding the isolated protease by contacting it with a
CC chaotropic agent, and LDAO in the presence of reduced concentration of the
CC chaotropic agent or a polar additive; (4) producing (M2) an active NS2/3
CC protease, involving diluting refolded inactive NS2/3 protease in a medium
CC containing an activation detergent to induce auto-cleavage of the NS2/3
CC protease; (5) measuring (M3) the auto-cleavage activity of NS2/3
CC protease, involving incubating the active NS2/3 protease and produce
CC cleavage products or their fragments, and measuring the presence or
CC absence of uncleaved NS2/3 protease, and measuring the presence or
CC absence of uncleaved NS2/3 protease, cleavage products or their fragments
CC and (6) screening a potential inhibitor of auto-cleavage activity of an
CC active NS2/3 protease, involving carrying out M3 in the presence of, or
CC absence of the potential inhibitor, comparing the amount of uncleaved
CC NS2/3 protease, cleavage products or their fragments. The protease is
CC useful for detailed biochemical characterisation of the enzymes and in
CC cute disease, which are useful as therapeutic agents against HCV
CC infection (which causes chronic liver disease, cirrhosis and end-stage
CC liver disease. M1 is useful for high level production of protease. The
CC present sequence represents the NS2/3 truncation mutant 827-1206
CC (numbered relative to the full length NS2/3 proteasin)

                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is a partial Hepatitis C Virus (HCV) polyprotein from the non-structral region. Partial proteinase sequences (AAR82692-93) are contained within this sequence. The proteinase can be used as anti-HCV agents. They can also be used to screen cpds. for their abblity to inhibit their proteolytic activity. In this way proteinase inhibitors can be identified. (Updated on 16-OCT-2003 to standardise OS field)

The proteinse is purified as a fused product with the dihydrofolate reductase protein by using a methotrexate column. It can be used for the development of an inhibitor for HCV proteinase. AAQ81559 encodes AAR68864 hepatitis C virus (HCV) RNA helicase. The DNA was used in the construction of an expression vector, which was used to transform a baculovirus host. The transformed baculovirus could then be used for the recombinant prodn. of HCV RNA helicase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       of hepatitis C virus helicase gene in baculovirus - useful for large scale prodn. of RNA helicase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 3010 AA;

                                                                                                                                                                                                                                                                                                                                                                        8
                                                                                                                                                                                                                                                                                                                                                                                                              맑
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention describes a self-replicating hepatitis C virus (HCV) coplynucleotide molecule comprising a 5'-non translated region (NTR), where guanine at position 1 is substituted for adenine, a HCV polyprotein cregion coding for a HCV polyprotein; and a 3'-NUR region. The self-creplicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating potential inhibitors of HCV replication. The HCV RNA molecule is also useful for efficiently establishing cell culture replication. The self-creplication is substituted for A, and therefore provides an alternative to position 1 is substituted for A, and therefore provides an alternative to conjunction with mutations in the HCV non-structural region, such as the CG (2042) C/R mutations, transduces and/or replicates with greater cefficiency. This amino acid sequence represents a mutant of the hepatitis C virus replicon APGK12 and contains the viral protease NS2/3, protease complex NS3/4, helicase NS3 and RNA-dependent RNA polymerase NS5B. Note: This sequence snown in ABG30580 using information given in the claims of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                  The invention describes a self-replicating hepatitis C virus (HCV) colymucleotide molecule comprising a 5'-non translated region (NTR), combine at position 1 is substituted for adenine, a HCV polyprotein region coding for a HCV polyprotein; and a 3'-NTR region. The self-creplicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating comprising a fell culture replication. The self-creplicating highlitors of HCV replication. The HCV RNA molecule is also useful for efficiently establishing cell culture replication. The self-creplicating polynucleotide molecule contains a 5'-NTR, where G at position 1 is substituted for A, and therefore provides an alternative to conjunction with mutations in the HCV non-structural region, such as the G[2042]C/R mutations, transduces and/or replicates with greater complex NSJ/4, helicase NSJ and RNA-dependent RNA polymerase NSJB. Note: C virus replicate NSJ and RNA-dependent RNA polymerase NSSB. Note: C complex NSJ/4, helicase NSJ and RNA-dependent RNA polymerase NSDB. Note: C with sequence does not appear in the specification but has been created complex NSJ/4, helicase NSJ and RNA-dependent RNA polymerase NSSB. Note: C with the wild type sequence shown in ABGJ0580 using information given in the claims of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        片
The invention describes a self-replicating hepatitis C virus (HCV) polynucleotide molecule comprising a 5'-non translated region (NTR), where guanthe at position 1 is substituted for adenine, a HCV polyprotein region coding for a HCV polyprotein; and a 3'-NTR region. The self-replicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating potential inhibitors of HCV replication. The HCV RNA molecule is also useful for efficiently establishing cell culture replication. The self-
                                                                                                                                                                                                                                                                     New self-replicating RNA molecules from Hepatitis C virus (HCV), possess enhanced transduction or replication efficiency, useful i evaluating potential inhibitors of HCV replication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Self-replicating; hepatitis C virus; HCV; HCV replication inhibitor; cell culture replication; NS2/3; NS3/4; NS3; NS5B; mutant; mutein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              replicating polynucleotide molecule contains a 5'-NTR, where G at position 1 is substituted for A, and therefore provides an alternative to existing systems comprising a self-replicating HCV RNA molecule that, in conjunction with mutations in the HCV non-structural region, such as the G(2042)C/R mutations, transduces and/or replicates with greater efficiency. This amino acid sequence represents a mutant of the hepatitis C virus replicon APGK12 and contains the viral protease NS2/3, protease complex NS3/4, helicase NS3 and RNA-dependent RNA polymerase NS5B. Note: This sequence does not appear in the specification but has been created from the wild type sequence shown in ABG30580 using information given in the claims of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 2201 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes a self-replicating hepatitis C virus (HCV) polymucleotide molecule comprising a 5'-non translated region (NTR), compared to the position of the substituted for adenine, a HCV polyprotein region coding for a HCV polyprotein, and a 3'-NTR region. The self-replicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating potential inhibitors of HCV replication. The HCV RNA molecule is also useful for efficiently establishing cell culture replication. The self-replication for efficiently establishing cell culture replication. The self-replicating polynucleotide molecule contains a 5'-NTR, where G at position 1 is substituted for A, and therefore provides an alternative to conjunction with mutations in the HCV non-structural region, such as the CG (2042) C/R mutations, transduces and/or replicates with greater conficiency. This amino acid sequence is encoded by the hepatities C virus replicates NFC/13, protease complex consisted the viral protease NFC/3, protease complex consisted the viral protease NFC/3, protease complex consisted the viral protease NFC/3, protease complex consisted the viral protease NFC/3, protease complex consisted the viral protease NFC/3, protease complex consisted the viral protease NFC/3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                 Ş
                                                                                                                                                                                                                                                                                                                                                                   The invention describes a self-replicating hepatitis C virus (HCV) coplynucleotide molecule comprising a 5'-non translated region (NTR), CC where guanine at position 1 is substituted for adenine, a HCV polyprotein core region coding for a HCV polyprotein; and a 3'-NTR region. The self-crepicating Hepatitis C virus (HCV) RNA molecule is useful for exclicitantly establishing cell culture replication. The self-creplicating polynucleotide molecule contains a 5'-NTR, where G at complex into substituted for A, and therefore provides an alternative to conjunction with mutations in the HCV non-structural region, such as the CG (2042) C/R mutations, transduces and/or replicates with greater CC efficiency. This amino acid sequence represente a mutant of the hepatitis complex NS3/4, helicase NS3 and RNA-dependent RNA polymerase NS2B. Note: Chis sequence does not appear in the specification but has been created cc the claims of the invention
                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                              The invention describes a self-replicating hepatitis C virus (HCV)
polynucleotide molecule comprising a 5'-non translated region (NTR),
compared planning at position 1 is substituted for adenine, a HCV polyprotein coronic coding for a HCV polyprotein, and a 3'-NTR region. The self-
comprising Hepatitis C virus (HCV) RNA molecule is useful for evaluating potential inhibitors of HCV replication. The HCV RNA molecule is also cuseful for efficiently establishing cell culture replication. The self-
complicating polynucleotide molecule contains a 5'-NTR, where G at comprisition is substituted for A, and therefore provides an alternative to constiting systems comprising a self-replicating HCV RNA molecule that, in conjunction with mutations in the HCV non-structural region, such as the CG (2042)C/R mutations, transduces and/or replicates with greater complexities and contains the viral protease NS21, protease complex consisting the viral protease NS21, protease complex consistency. This amino acid sequence is encoded by the hepatitis C virus consistency and RNA-dependent RNA polymerase NS5B Note: this consistency was presented from replicon APGK12 shown in ABG30581
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New self-replicating RNA molecules from Hepatitis C virus (HCV), who possess enhanced transduction or replication efficiency, useful for evaluating potential inhibitors of HCV replication.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Self-replicating; hepatitis C virus; HCV; HCV replication inhibitor; cell culture replication; NS2/3; NS3/4; NS3; NS5B; mutant; mutein.

The self-replicating Hepatitis C virus (HCV) RNA molecule is useful for evaluating potential inhibitors of HCV replication. The HCV RNA molecule is also useful for efficiently establishing cell culture replication. The self-replicating polynucleotide molecule contains a 5'-NTR, where G at position 1 is substituted for A, and therefore provides an alternative to existing systems comprising a self-replicating HCV RNA molecule that, in conjunction with mutations in the HCV non-structural region, such as the G(2042)C/R mutations, transduces and/or replicates with greater efficiency. This amino acid sequence is encoded by the hepatitis C virus replicon APGK12 and contains the viral protease NS2/3, protease complex NS3/4, helicase NS3 and RNA-dependent RNA polymerase NS5B
                                                                                                                      20-DEC-2001; 2001WO-CA001843
                                                                                                                                                                                   04-JUL-2002
                                                                                                                                                                                                                                                WO200252015-A2
